Building Control (Amendment) Act 2012 and Regulations 2012: ERSS – Submission Requirements

Building Engineering Group
Building and Construction Authority
May 2015
Content:

1. General Definitions
2. Submission requirements for ERSS
General Definitions

- **Earth Retaining Structure**
  - Any structure, structural system or other means used to maintain the shape of excavation during construction, earth filling or cutting
# Submission Requirement for ERSS

<table>

</tbody>
</table>

**Notes:**
- Plan approval is not required for insignificant building works listed on First Schedule of Building Regulation 3A.
- **If the structure that retains earth is not constructed of reinforced concrete or steel, then the applicable depth is 1 m instead of 1.5 m.**
- Planning approval is no longer required for any retaining wall or earth-retaining structure for supporting the face of an excavation made for the purpose of constructing any pile cap, footing, sump, lift pit or trench, provided that the size of these structures does not exceed 10 square meters in area and 2 meters in depth.
Submission requirement for excavation works within a building worksite

All excavations within a building worksite shall be submitted for plan approval except for excavation not deeper than 1.5 m (general excavation) or 2 m (for localise excavation for pile cap, footing, sump, lift pit or trench where the size of pile cap, footing, sump, lift pit or trench does not exceed 10 square metres).
Submission requirement for excavation

* Except those exempted in the First Schedule of Building Regulations and not located within a construction site together with other building works

**For pile cap, footing, sump, lift pit or trench, with the size of the pile cap, footing, sump, lift pit or trench does not exceed 10 square metres

For cases where H exceed 4 m, QP and AC are required for plan submission.
For cases where H exceed 6 m, QP, AC, QP(Geo) and AC(Geo) are required for plan submission.
Examples of localise excavation

CASE 1

Plan area of footing = 6 m²

Excavation depth = 1.8 m

Plan submission is NOT required

CASE 2

Plan area of footing = 12 m²

Excavation depth = 2.1 m

Plan submission is required
Examples of localise excavation

CASE 3
Plan area of footing = 6 m²
Excavation depth = 2.1 m

CASE 4
Plan area of footing = 12 m²
Excavation depth = 1.8 m
Table 1: Allowable maximum ERSS wall deflection limits

<table>
<thead>
<tr>
<th>Wall deflection limits/Zones</th>
<th>Locations of buildings, structures and critical utilities</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Zone 1 (x/H &lt; 1)</td>
</tr>
<tr>
<td></td>
<td>Zone 2 (1 ≤ x/H ≤ 2)</td>
</tr>
<tr>
<td>Allowable maximum ERSS</td>
<td>Ground Type A</td>
</tr>
<tr>
<td>wall deflection limits</td>
<td>Ground Type B</td>
</tr>
<tr>
<td>(δw/H)</td>
<td>0.5%</td>

<tr>
<td></td>
<td>0.7%</td>
</tr>
<tr>
<td></td>
<td>0.7%</td>
</tr>
<tr>
<td></td>
<td>1.0%</td>
</tr>
</tbody>
</table>

Ground Type A refers to over-consolidated stiff clays and silts, residual soils, and medium to dense sands; and Ground Type B refers to soft clays, silts or organic soils extending to or below formation level (e.g. Kallang Formation) and loose fills.

In any case, the allowable wall deflection limits shall also be determined by the prevention of structural damage to neighbouring buildings or structures arising from ground deformations.

ERSS – Submission Requirements

• Plans Submission
  (a) Plans approval is required for ERSS
    - To attach ERSS_Annex A
    - To include site investigation report with PE certification
  (b) Require Permit to commence work
    - to attach ERSS_Annex B
    - Commencement of work: to notify BCA

• During Construction Stage
  - To implement ERSS_Annex C and D at site
  - To submit ERSS_Annex E to BCA monthly
Re-used of structural steel material

Engineer to specify specification of steel material on plan and check the condition of steel material at site.

Where re-used structural steel is used, the structural design shall fully consider any imperfections and conditions of such materials.

Quality assurance scheme developed for “reused struts” for bracing excavations has been incorporated into the BC1:2012.

1. I, ________________________, the Professional Engineer, PE Registration No. ____________________ certify that the Site Investigation Report comprising all field and laboratory data, tests and results therein has been carried out by me or under my supervision or direction, and I have verified the accuracy of the information given in the site investigation report, and to the best of my knowledge and belief, all have been prepared in compliance in all respects with the provisions of the Building Control Act and Regulations, relevant Codes of Practice and Standards.

2. I further certify that I have the appropriate qualifications and experience, and I am familiar with the purpose of the investigation for which this Site Investigation Report is prepared in reference to Project Ref. No: ____________________

3. Total number of pages in the Site Investigation Report is ________________.

______________________________  
Professional Engineer for Site Investigation  

______________________________  
Date  

Signature and Stamp
Record Plans (As-built Plans)

Permanent ERSS structures

Same procedure as per building works to submit:
- a) C1, C2 and C3 forms
- b) Record piling plans
- c) Record structural plans (if any)
Record plans to be endorsed by QPs and ACs of the approved plans

Temporary ERSS

a) Record plans are not required.
Excavation Works: Basement Construction

Localise pits shall also be submitted as part of the main excavation ERSS plan.
Insignificant Building Works: Utilities such as Sewers, water and gas pipes with diameter of 1m or less

Submission requirement for utilities within construction site together with other building works:
H ≤ 4 m – ERSS plan to be submitted by QP
H > 4 m – ERSS plan to be submitted by QP and AC
Utilities pipe – Plan to be submitted by QP

Any trenches for the purpose of laying sewers/utilities (including its associated shaft or manholes) not exceeding 1m in diameter in conjunction with any public sewerage/utilities system is classified as insignificant work which requires no plan submission. This exemption does not apply to cases where the trenches for the purpose of laying sewers/utilities (diameter less than 1m) are within a construction site where the size of trench exceeds 10 square metres or exceeds 2m in depth.
Excavation Works: Utilities pipes (such as sewers, water and gas pipes) with diameter larger than 1 m and not greater than 2 m and its associated shafts or manholes

Submission requirement:
H ≤ 4 m – ERSS plan to be submitted by QP
H > 4 m – ERSS plan to be submitted by QP and AC
Utilities pipe – Plan to be submitted by QP and AC
